

Information Technology

Highway Transport utilizes the latest technologies to provide quality service to our customers

- Increased productivity, security, mobility and collaboration
- Data management and disaster recovery
- Operational efficiencies, resource utilization, customer communication and driver safety

We offer **EDI communication**, as well as web services, through partners such as Four Kites and MacroPoint.

Through the newly enhanced customer portal, Highway Transport provides customers with:

- Order information
- Document retrieval
- Real time tracking of cargo
- Historical reporting
